

Environmental Footprint Declaration

RETORTE Selenium Products

This document presents an environmental footprint declaration based on the results of a life cycle assessment (LCA) of RETORTE selenium products, developed in accordance with ISO 14040 and ISO 14044 standards and the principles of ISO 14025. No applicable Product Category Rules (PCR) were available at the time of publication.

1. General information

Product name	RETORTE selenium products
Declared unit	1 kg of selenium contained in selenium products
Manufacturer	RETORTE GmbH, Aurubis subsidiary
Production site(s)	RETORTE site, Germany
LCA	Aurubis supported by Sphera
Publication date	19/10/2026
Time coverage	Reference calendar year 2025
Independent verifier	TÜV NORD CERT Prüf- und Umweltgutachtergesellschaft mbH
Review type	Critical review per ISO 14044 (Clause 6)

2. Methodology and scope

Applied standards/guidelines: The study was conducted in accordance with the ISO 14040 (ISO 14040:2021 Environmental management — Life cycle assessment — Principles and framework) and ISO 14044 (ISO 14044:2021 Environmental management — Life cycle assessment — Requirements and guidelines) LCA standards and the Environmental Footprint impact assessment method (3.1).

Functional unit: 1 kg of selenium contained in selenium products (zinc selenite; sodium selenite; high-purity selenium; selenous acid; selenium dioxide; selenium granules/powder) at plant gate.

System boundaries: Cradle-to-gate life cycle inventory from the extraction of raw materials to the production of selenium products at RETORTE, based on the allocated profile of crude selenium from precious metals refining. The final profile includes the processing of crude selenium into finished RETORTE selenium products. Excludes packaging, downstream use, and end-of-life.

Allocation procedures: Allocation applied to precious metal refining to allocate impacts between silver, gold, PGM concentrate, and crude selenium.

3. Product

Product description: RETORTE selenium products are high-purity materials produced by processing crude selenium. The crude selenium is refined by RETORTE GmbH, a subsidiary of Aurubis, into selenium pellets, powders and compounds. These products are known for their consistent quality and ultra-low iron content, with ultra-pure selenium reaching up to 99.999 % purity.

Technical properties/applications: RETORTE selenium exhibits semi-metallic properties making it suitable for applications such as glass coloring and decolorizing, digital X-ray detectors, infrared optics, and electroplating. Ultra-pure selenium (up to 99.999 %) is particularly ideal for high-performance uses such as CIS/CIGS solar cells, where material purity is essential for efficiency and long-term stability. Selenium compounds such as sodium and zinc selenite/selenate are also used in pharmaceuticals, animal feed additives, and various chemical industry processes.

Expected service life: Highly dependent on downstream application. Selenium used in solar panels or electronics may remain in use for decades, while applications in feed or pharmaceuticals involve short-term use.

4. Environmental performance — impact results (per 1 kg selenium contained in selenium products)

Impact category	Unit	Result
Climate change	kg CO ₂ eq	15.6
Ozone depletion	kg CFC-11 eq	0.000000001
Human toxicity, cancer effects ¹	CTUh	0.000000004
Human toxicity, non-cancer effects ¹	CTUh	0.0000001
Particulate matter	Disease incidences	0.0000001
Ionizing radiation	kBq U235 eq	0.78
Photochemical ozone formation	kg NMVOC eq	0.097
Acidification	mol H+ eq	0.11
Eutrophication (terrestrial)	mol N eq	0.417
Eutrophication (freshwater)	kg P eq	0.0001
Eutrophication (marine)	kg N eq	0.04
Ecotoxicity (freshwater) ¹	CTUe	79.3
Land use ¹	Pt	965
Water use	m ³ world eq	32.4
Resource use, fossils	MJ	131
Resource use, minerals and metals ¹	kg Sb eq	0.003

¹ Impacts are not sufficiently robust and accurate to be used for metals.

5. Environmental performance improvement and comparison with global average

The following graphs show the environmental developments between 2023 and 2025 for RETORTE selenium product production.

No industry average data is available for comparison.

Carbon footprint

in kg CO₂ eq/kg Se

Eutrophication, marine

in kg N eq/kg Se

Resource use, fossils

in GJ/kg Se

Eutrophication, terrestrial

in mole N eq/kg Se

Acidification

in mole of H⁺ eq/kg Se

Summer smog

in kg NMVOC eq/kg Se

Eutrophication, freshwater

in kg P eq/kg Se

Water use

m³ world eq/kg Se

6. Additional environmental information

Environmental labels/Certifications: Aurubis RETORTE, the selenium products producing site, is certified to ISO 14001 and ISO 50001.

7. Interpretation and conclusions

The environmental impact of selenium product manufacturing is mainly driven by the production of crude selenium, with minor contributions from electricity use and auxiliary materials at the RETORTE site.

The updated environmental profile in 2025 is higher than in 2024 for all impact categories. This is due to a higher share of impacts allocated to crude selenium in precious metals refining.

Aurubis' sustainability efforts — especially at the Hamburg site, the main supplier of crude selenium — play a key role in reducing the environmental footprint. Investments in energy-efficient and low-carbon technologies across the Aurubis Group have further improved performance.

8. Verification

Verification type	Critical review in accordance with ISO 14040 (2021) and ISO 14044 (2021)
Verifier name & organization	Michael Sommer Dennis Nowroth TÜV NORD CERT Prüf- und Umweltgutachtergesellschaft mbH Am TÜV 1, 30519 Hannover, Germany Phone +49 (0) 511 986-1172 Email micsommer@tuev-nord.de; dnowroth@tuev-nord.de
Date of verification	1/10/2026

The review confirmed that the LCA complies with the applicable standards and is scientifically and technically valid.

9. Disclaimer

This declaration has not been issued under a program operator and has not been verified in accordance with a PCR because none is available. The information is provided for transparency and B2B communication purposes.
